SECTION 01 Purpose & Scope

This document defines the functional requirements of the Supplier Portal: an internally-hosted application, with a public self-service extension, used to register suppliers, collect and validate their onboarding information, gather supporting KYC documents, route each record through a workflow, and maintain the supplier master. It is written so that business stakeholders can review each requirement and formally sign off on the scope.

1.1 In scope

- Supplier registration, the multi-step onboarding form, and the supplier master dashboard.
- The configurable field framework (visibility, mandatory/optional, list-of-value dropdowns) and data-quality validations.
- The public **supplier self-service** flow (secure link + one-time passcode), including the supplier declaration.
- KYC document capture, the record status workflow, bulk import/export, and BU-branded email notifications.
- Supporting administration: Business Units, Users & access, Supplier Fields configuration, and the Audit Log.

1.2 Out of scope

- Customer Portal and Leasing / Landlord / Broker modules (covered by separate documents).
- Downstream ERP posting; the portal is the system of capture, not the ERP of record.

1.3 Definitions

- **BU** — Business Unit; the company/entity a supplier and a user are scoped to.
- **LOV** — List of Values; a controlled dropdown of allowed options.
- **KYC** — Know Your Counterparty supporting documents (Trade Licence, VAT certificate, bank letter).
- **OTP** — One-Time Passcode emailed to a supplier to confirm identity before opening the self-service form.
- **TRN** — Tax Registration Number; **TIN** — Taxpayer Identification Number.
- **Self-service** — the public, DMZ-facing form a supplier completes via an emailed link.

SECTION 02 Actors & Roles

Access to the portal is granted per user and is independent of their administrative role — a user only sees the portals explicitly enabled on their account, scoped to their assigned Business Unit(s).

- **Administrator** — Full access to enabled portals; manages users, Business Units, field configuration and the audit log. Edits records with all fields open.
- **Normal User (Vendor Management)** — sends self-service links, reviews submissions and maintains the master, within their assigned Business Unit(s).
- **Supplier (External)** — Receives a secure link, verifies via OTP, and completes their own information through the public self-service form.

- **System** — Sends notifications, issues/expires tokens, enforces validation, advances status and writes the audit trail.

Access rule: an Administrator with no Business Unit assignment sees every BU's suppliers (org-wide). Any user assigned to specific Business Units — administrator or not — is scoped to only those units on every list, upload, export and register screen.

FR-1 Authentication & Access Control

ID	REQUIREMENT	PRIORITY
FR-1.1	The system shall authenticate users via **Active Directory / SSO** or a local password, per the user's configured authentication source.	**Must**
FR-1.2	The system shall grant the Supplier Portal only to users whose account has **Supplier portal access** enabled, and shall hide the module from all others.	**Must**
FR-1.3	The system shall scope every supplier list, register, upload and export to the user's assigned **Business Unit(s)**; an unassigned administrator is treated as org-wide.	**Must**
FR-1.4	The system shall support self-registration of a pending account that an Administrator later links/completes before access is active.	Should

FR-2 Onboarding Form & Field Framework

The onboarding form is a stepped wizard with five sections presented across two pages (Address and Contact share a page): 1 Business / Organization, 2 Address & Contact Information

ID	REQUIREMENT	PRIORITY
FR-2.1	The form shall present the five sections above with per-step **Save & Next** navigation and a completion indicator.	**Must**
FR-2.2	Each field's **visibility** and **mandatory/optional** status shall be configurable centrally (Settings ▸ Supplier Fields) and shall drive rendering without code changes.	**Must**
FR-2.3	Controlled fields (Tax Organization Type, Taxpayer Country, VAT Registration Type, Trade Licence Issuing Body,...) shall be selected from **LOV dropdowns**, not free text.	**Must**
FR-2.4	Country selections shall display a combined **code + name** (e.g. "AE — United Arab Emirates"); the UAE shall drive an Emirate LOV while other countries use free-text city.	Should
FR-2.5	When **VAT Registered = No**, the TRN/VAT Registration Number and VAT Registration Type fields shall be hidden and shall not be mandatory.	**Must**
FR-2.6	The form shall ask, via a Yes/No toggle, whether the address is the same as on the Trade Licence and VAT Certificate; when **No**, an alternate "Address as per VAT Certificate" shall be required.	**Must**

ID	REQUIREMENT	PRIORITY
FR-2.7	Section titles and tab visibility shall be administrator-configurable; a hidden section shall be skipped in the wizard flow.	Should
FR-2.8	The form shall support additional contacts and, for VAT-group suppliers, the number and legal names of entities under the group.	Should
FR-2.9	On final submission the supplier shall accept a **declaration** (VAT-registered or non-VAT variant) recorded against the record.	**Must**

FR-3 Data-Quality Validations

ID	REQUIREMENT	PRIORITY
FR-3.1	Every field marked **Mandatory** shall be enforced before the supplier can advance a step or submit.	**Must**
FR-3.2	Email fields shall be validated for a proper **email format** (local@domain.tld).	**Must**
FR-3.3	**Supplier TIN** shall be exactly **10 digits**; **TRN / VAT Registration Number** shall be exactly **15 digits** (the TRN rule applies only when VAT-registered). Input length is capped at source.	**Must**
FR-3.4	The **Trade Licence Issue Date** shall not be in the future, and the **Expiry Date** shall not precede the Issue Date.	**Must**
FR-3.5	Validation messages shall be surfaced as brief, auto-dismissing **toast** notifications shown one at a time.	Should

FR-4 KYC Document Management

ID	REQUIREMENT	PRIORITY
FR-4.1	The system shall capture supporting documents — **Trade Licence**, **VAT Certificate** and **Other** — with upload, view and download.	**Must**
FR-4.2	Uploads shall be size-limited (10 MB per file) and stored **outside the web root**, served only through an authenticated endpoint.	**Must**
FR-4.3	A user shall be able to **download all** of a supplier's documents as a single ZIP, and export the document set as a combined PDF or Excel workbook.	Should
FR-4.4	Documents required for the supplier's VAT status (e.g. VAT certificate when a TRN is provided) shall be enforced at submission.	**Must**

FR-5 Supplier Self-Service & OTP

Suppliers complete their own information through a public, DMZ-facing form reached by a secure emailed link and protected by a one-time passcode. Flow: invitation sent (record → Awaiting Supplier Response) →

supplier opens secure link → enters emailed OTP → scoped session opens the form → supplier updates, uploads, signs the declaration and submits → record auto-completes and notifications are sent.

ID	REQUIREMENT	PRIORITY
FR-5.1	Self-service links shall be opaque, single-supplier-scoped tokens with a **14-day** validity and carry no record identifiers in the URL.	**Must**
FR-5.2	Access shall require an emailed OTP valid for **10 minutes**, limited to **5 attempts** and **5 re-sends**; the destination email shall be masked on screen.	**Must**
FR-5.3	Which fields the supplier may edit shall be governed by the field configuration (supplier-facing control), distinct from the internal view.	**Must**
FR-5.4	On submission the system shall expire the supplier's outstanding tokens for that record.	Should

FR-6 Status Workflow

Workflow: Not Submitted → Awaiting Supplier Response → Completed (or Rejected). A supplier submission is final and auto-completes the record — there is no separate review step.

ID	REQUIREMENT	PRIORITY
FR-6.1	Each supplier shall carry one of the statuses: **Not Submitted, Awaiting Supplier Response, Completed, Rejected**.	**Must**
FR-6.2	Sending a self-service invitation shall set **Awaiting Supplier Response**.	**Must**
FR-6.3	A supplier self-service submission shall **auto-mark the record Completed** with no further review, and shall email the supplier confirming their response was received and updated.	**Must**
FR-6.4	A user shall be able to **Return** a record, which re-sends the self-service link and sets the status back to Awaiting Supplier Response.	**Must**
FR-6.5	A completed record may be **Rejected** and resubmitted for correction.	Should
FR-6.6	The record shall show an **email history** of invitations and OTPs, with timestamps in the viewer's local time.	Should

FR-7 Supplier Dashboard

ID	REQUIREMENT	PRIORITY
FR-7.1	The dashboard shall list suppliers within the user's Business Unit scope, with tabs and paging, and status count tiles.	**Must**
FR-7.2	Users shall be able to filter by **Business Unit** (with unit logo), **status**, **priority** and supplier name.	**Must**

ID	REQUIREMENT	PRIORITY
FR-7.3	Records shall be sortable by **Priority** (P1 → P2 → P3, then unset) with most-recently-updated first within each band.	Should
FR-7.4	Each row shall link to the supplier record for review and editing.	**Must**

FR-8 Bulk Import & Export

ID	REQUIREMENT	PRIORITY
FR-8.1	The system shall **import** suppliers from an Excel template, within the user's Business Unit scope, surfacing row-level errors on failure.	**Must**
FR-8.2	The system shall provide a downloadable **template** — blank or populated — with a progress indicator while it is generated.	Should
FR-8.3	The system shall **export** suppliers as: re-importable Excel template, full-field Excel report, CSV and PDF, plus a print view.	**Must**
FR-8.4	The full report shall include **Priority** and **Department User Name** (the internal user who entered the record) alongside supplier attributes.	Should

FR-9 Email Notifications

ID	REQUIREMENT	PRIORITY
FR-9.1	The system shall email a branded **update-request** notification carrying the supplier's respective **Business Unit logo** and a secure link.	**Must**
FR-9.2	The system shall email **OTP codes**, a **submission confirmation** to the internal requestor, and a **completion confirmation** to the supplier.	**Must**
FR-9.3	Email templates shall be maintainable (branding, colours, wording) without code changes to the sending logic.	Should

FR-10 Administration & Settings

ID	REQUIREMENT	PRIORITY
FR-10.1	Administrators shall manage **Business Units**, including a logo (upload or hosted Logo URL) used in emails and branding.	**Must**
FR-10.2	Administrators shall manage **Users** — authentication source, portal access and Business Unit assignment.	**Must**
FR-10.3	Administrators shall configure **Supplier Fields** — visibility, mandatory/optional, supplier-facing control, section titles and list length.	**Must**

ID	REQUIREMENT	PRIORITY
FR-10.4	The system shall maintain an **Audit Log** of key actions (create, edit, notify, status change) with actor and timestamp.	Must

NFR Non-Functional Requirements

ID	REQUIREMENT	PRIORITY
NFR-1	**Security.** Self-service links carry no record identifiers; OTP codes and passwords are stored hashed; uploaded files live outside the web root; the public form is separated from the internal application (DMZ).	Must
NFR-2	**Auditability.** All state-changing actions are attributable to a user and time-stamped.	Must
NFR-3	**Usability.** The onboarding form is responsive on modern browsers; timestamps display in the viewer's local time.	Should
NFR-4	**Configurability.** Field behaviour, section titles, LOVs and email branding are data-driven and changeable without a code release.	Should
NFR-5	**Data residency.** Supplier master and documents are held within the organisation's own database and storage.	Must

SECTION 03 Assumptions & Dependencies

- SMTP / database mail is available for sending invitations and OTPs.
- A public (DMZ) host is published for the self-service form and reachable by suppliers.
- Business Units, LOV master data and user accounts are set up before go-live.
- Supplier contact email addresses are accurate — they are the delivery target for links and OTPs.

APPROVAL Business Unit Sign-off

The following Business Unit representatives confirm their review and approval of this document.

Business Unit / Function	Business Unit Signatory	Signature	Date
Master Data Management	**Hojoh K. G** MDM Manager		14-09-2026
DI Corporate Finance	**Abdul Basith Lowna** Accounts Manager
